

HYRON

**The history of HYRON spans the ages
and vast expanses, ranging from
civilian watchmaking to aeronautics.**

It begins at the end of the 1870s (1877) in the USA. The watch company founded by European immigrants, then under the name Dueber-Hampden Co., played a key role in the heyday of the American watchmaking industry, producing thousands of movements a day. Around 1930, when the country was going through the Great Depression, Russia took a close interest in these high performance means of production.

It grabbed the opportunity and bought all the company's prototypes, machines, tools and stock. These acquisitions marked the beginning of an industry that is still flourishing to this day. Initially located in Moscow later the factory was moved to Chelyabinsk in the south of the Ural and christened MOLNIJA.

Unmatched reliability for extreme conditions

The MOLNIJA establishment regroups the best watchmakers, engineers and technicians in the country. Its know-how is focused mainly on the production of high-precision horological mechanisms for the Ministry of Defense. The clocks, which are made for the aeronautical industry, withstand extreme climatic conditions and a hostile environment. Their reliability is a question of survival. On many occasions, these pieces have proved to be infallible and unfailingly robust.

Today, MOLNIJA is revising the realm of civilian watchmaking and is calling upon Swiss watch designer JORG HYSEK for the creative direction of its watch line. HYRON is the result of this collaboration.

HYRON combines centuries-old legendary know-how with visionary Swiss watch design. This implies both two-fold expertise and doubly high quality demands complying with the highest watchmaking standards.

HYRON watches combine ancestral mystery with a modern vision. Reliability, a spirit of conquest and determination are embedded in their very genes. The HYRON watch collection is exclusively made from high-quality materials ensuring its resistance.

DIVEMASTER is the first collection released under HYRON brand

DIVEMASTER collection is specially designed for dive enthusiasts and fans of an active lifestyle. Distinctive dial with large luminescent hour markers, rotatable bezel and comfortable silicone strap make this model truly universal and essential tool in the depth of the sea.

Watch performed in the diver style does not lose popularity due to its reliability, multipurposeness and spectacular appearance. It had been developed specifically for divers, but after years lost their professional status, however, retaining their primary original attribute – high waterproofness. Large indexes clearly visible even in the darkness are performed in the “Shark tooth” style: with indicative triangular signs on 12 and 6 hours. Shape of silicone strap with styled fins along the edges are supplemented by the “shark” pattern of HYRON DIVEMASTER line-up.

HYRON DIVEMASTER are equipped appropriately to a diving watch with unilateral bezel rotating up to 60 clicks which allows to calculate the diving time based on the oxygen remaining in air cylinders.

Scratch proof sapphire glass and screw-down winding stem provide watertight integrity and guarantee high waterproofness of watch down to 200 meters – all of it truly allows to call this model multi-purpose and indispensable when exploring the sea depths!

DIVEMASTER COLLECTION

- Limited edition 500 pieces
- Swiss made, manual winding Sellita 215-1, 19 jewels
- Power reserve 42 hours when fully wound
- Data indicator
- Second hand
- Luminescent coating on indexes, hands, dial and rotating bezel
- Screw-down winding stem
- Sapphire glass
- WR 20 ATM
- Diameter 48 mm
- Case material Steel 316L
- Strap width 26 – 24 mm
- Strap material – silicone
